

Thyristor Surge Suppressors - DO-15/DO-27

Description

PxxxxL DO-15/DO-27 series thyristors are a type of semi-conduct component. They are designed to protect baseband equipment from damaging overvoltage transients. such as modems, telephones, line cards, answering machines, FAX machines, T1/E1, xDSL and more.

Features

- Excellent capability of absorbing transient surge
- Quick response to surge voltage (ns Level)
- Eliminates overvoltage caused by fast rising transients
- Moisture sensitivity level: Level 1
- Fails short circuit when surged in excess of ratings
- Non degenerative

Parameter	Definition	
V_{DRM}	Peak Off-state Voltage – maximum voltage that can be applied while maintaining off state	
V_S	Switching Voltage – maximum voltage prior to switching to on state	
V_T	On-state Voltage – maximum voltage measured at rated on-state current	
I_{DRM}	Leakage Current – maximum peak off-state current measured at V_{DRM}	
I_S	Switching Current – maximum current required to switch to on state	
I_T	On-state Current – maximum rated continuous on-state current	
I_H	Holding Current – minimum current required to maintain on state	
C_O	Off-state Capacitance – typical capacitance measured in off state	
I_{PP}	Peak Pulse Current – maximum rated peak impulse current
